Your phone photo, turned into a *studio shoot.*

10 copy-paste prompts for the free plans of ChatGPT or Gemini: studio, lifestyle, flat lay, festive, ad banner and more. Every prompt tells the AI to keep your real product exactly the same.

STEP 1
Take a phone photo in daylight on a plain surface.

STEP 2
Upload it to ChatGPT or Gemini.

STEP 3
Paste a prompt + the keep line. Fill in the [brackets].

THE KEEP LINE — ADD IT TO EVERY PROMPT

```
Keep the product from my photo exactly as it is: same shape, size, colours, material, label text, logo and every printed detail. Do not redraw, translate or change any text on it. Only change the background, lighting, props and camera angle.
```

WHAT'S INSIDE

01 Clean studio shot
02 Premium dark hero
03 Cafe table, morning sun
04 Flat lay from above
05 In someone's hand
06 Festive Diwali theme
07 Ad banner with space for text
08 Outdoors in nature
09 Floating with ingredients
10 In use at home

01 Clean studio shot

Best for: Website, Amazon / Flipkart, catalogue

Turn my photo into a professional e-commerce studio shot. Put the product in the centre on a seamless [pure white / light grey / soft pastel] background, with soft diffused studio light from the left, a gentle natural shadow under it and sharp focus. Square 1:1, high resolution, like a full-frame camera with a 100mm lens.

02 Premium dark hero

Best for: Launch posts, premium products

Make a premium hero shot of my product on a glossy black surface with a soft reflection, a dark gradient background, a thin rim light outlining its edges and one warm key light from above. Moody, luxury, high contrast, 4:5 portrait.

03 Cafe table, morning sun

Best for: Instagram feed, lifestyle

Place my product on a wooden cafe table by a window in warm morning sunlight, with a coffee cup and a folded newspaper softly out of focus behind it, natural shadows and a shallow depth of field. Real photo look, 4:5 portrait.

04 Flat lay from above

Best for: Carousels, product + what goes with it

Create a top-down flat lay of my product on a [linen / marble / kraft paper] surface, surrounded by a few props that suit a [your category, e.g. skincare / tea / stationery] brand, neatly arranged with breathing space. Even soft daylight, no harsh shadows, 1:1 square.

05 In someone's hand

Best for: Shows real size, feels personal

Show my product held naturally in a person's hand, close-up, with a softly blurred [home / street / office] background. Natural skin, relaxed fingers, the product facing the camera with its front label fully visible. 4:5 portrait.

06 Festive Diwali theme

Best for: Festival offers and greetings

Put my product in a festive Diwali scene: glowing clay diyas, marigold flowers, a little rangoli and warm golden bokeh lights in the background, on a rich [maroon / deep green] cloth. Warm, joyful, premium, 4:5 portrait. (Swap Diwali for Holi, Eid, Christmas or Raksha Bandhan.)

07 Ad banner with space for text

Best for: Ads, offers, website banners

Make a clean advertising image with my product on the right third of the frame and plenty of empty, uncluttered space on the left for a headline. Simple [brand colour] gradient background, soft studio light, a subtle shadow. Do not add any text, letters or logos to the image. 16:9 landscape.

08 Outdoors in nature

Best for: Natural, organic and outdoor brands

Place my product on a smooth stone outdoors with green leaves and soft dappled sunlight around it and a hint of water droplets, background softly blurred. Fresh, natural, bright, 4:5 portrait.

09 Floating with ingredients

Best for: Food, drinks, cosmetics

Make a dynamic shot of my product floating slightly in the air against a [colour] background, with its key ingredients [e.g. coffee beans / orange slices / rose petals] floating around it, frozen mid-air, crisp studio light. Energetic, high-end commercial look, 4:5 portrait.

10 In use at home

Best for: Shows where it belongs

Show my product in a real, tidy [living room / kitchen / bathroom shelf / desk] where it would normally be used, as the clear focus of the photo, with soft window light and a few everyday items around it. Looks like a real home photo, not a 3D render. 4:5 portrait.

TIPS

Get it right *first time.*

- Shoot the phone photo in daylight on a plain surface, product filling most of the frame, label facing you.
- Upload the photo first, then paste the prompt. Fill in the [brackets] for your product.
- If the label or logo changes, reply: "The label changed. Keep the product exactly as in my original photo and regenerate only the background."
- Want a small change? Reply "Keep everything, only change [the background colour / the light / the props]".
- Always check the label, colours and size against the real product before you post. Sell what you actually ship.
- Amazon's main product image needs a pure white background: use prompt 1 with pure white.
- Free plans have daily image limits, so if you hit one, try the other app or come back tomorrow.
